**The Underground Injection Control Program Offers Tribal Consultation** – Region 3's Underground Injection Control (UIC) Program has offered consultation opportunities for four upcoming permit actions. The Region offered consultation to the seven federally recognized tribes in Virginia for a managed aquifer recharge project using advanced water treatment processes to produce a highly treated water for injection into the Potomac Aquifer. Jim Bennett, Water Division's Source Water and UIC Section Chief, provided an overview of the project to the tribes during the Regional Tribal Operations Committee (RTOC) Meeting. The tribes were grateful for the early engagement and the Nansemond Nation has currently requested to be involved in consultation. Prior to offering consultation to the RTOC, the UIC Program offered consultation to the Seneca Nation for three permit actions in the Allegheny Watershed in Pennsylvania. After attending meetings conducted by the UIC Program, the Seneca Nation provided comments on the Roulette permit and has expressed interest in consulting on both Bull Run Resources, LLC and Catalyst Energy, Inc. permits. **(James Bennett, 215-814-5469)**
